

California legislature passes textile EPR, SB 1383 updates and much more

If the bill is signed, California could become the first state to adopt a textile extended producer responsibility program. Lawmakers also approved EPR updates for paint, carpet and marine flares.

A compost pile in California. State legislators in Sacramento approved several waste and recycling bills in 2024 meant to establish and modernize EPR programs and update SB 1383 organics recycling rules. Permission granted by Agromin

California state legislators approved a range of waste and recycling bills last week before wrapping up their session on Aug. 31. The bills will now head to Gov. Gavin Newsom for a final decision by Sept. 30.

If these bills are signed, California could become the first state to establish an extended producer responsibility program for textiles. The state is also poised to update its paint EPR program and replace its carpet management program with a new EPR model.

Legislators also passed several bills related to SB 1383, the state's complex organics recycling law. However, bills related to compost facility zoning, packaging EPR updates and other topics failed to pass before the end of the session.

Additionally, the legislature passed multiple packaging-related bills with implications for the waste and recycling industry. Notable examples include an effort to standardize expiration date labels, which supporters say could reduce food waste, and a bill to tighten the state's regulation of plastic grocery bags. Both measures saw support from notable waste industry groups.

Read on for more highlights from the waste and recycling bills that previously made it through California's legislative crossover deadline in May:

Bill number	Topic	Status
SB 707	EPR for textiles	Passed
SB 1143	EPR for paint	Passed
AB 863	EPR for carpet update	Passed
SB 1066	EPR for marine flares	Passed
SB 972	Organics recycling technical assistance	Passed
SB 1046	Compost facility permit model	Passed
AB 2346	SB 1383 procurement requirement updates	Passed
AB 2902	SB 1383 collection requirements delays	Passed
SB 1280	Reusable or refillable propane cylinders	Passed
SB 1231	EPR for packaging updates	Held in Assembly committee
SB 1045	Compost facility zoning model	Held in Assembly committee

AB 2514	Biomethane procurement and biosolids updates	Ordered to inactive file
SB 1208	Prohibits discharge permit for proposed East Otay Mesa landfill	Stalled in Assembly

SB 707: EPR for textiles

California’s potentially first-in-the-nation EPR program for textiles would require producers of certain apparel and other textile products to establish a producer responsibility organization. If the bill is signed into law, CalRecycle will need to adopt regulations to implement the program no earlier than July 1, 2028. The PRO will need to submit a plan for collection, repair and recycling of such textiles by July 1, 2030.

Recent updates to the bill include adding online marketplaces with sales over \$1 million and requiring the PRO to develop a needs assessment for covered products. The PRO’s plan will also now be required to include details such as how to manage PFAS in products and how products will reach “responsible end markets.”

The California Product Stewardship Council, the main sponsor, has said textiles are the fastest-growing category of residential and commercial waste in the state. CPSC said the cost of managing such material often falls on thrift stores and secondhand markets, along with local governments that “face costly challenges expanding textile collection and sorting” while clothing producers continue to churn out new products. ▶

The bill garnered support from Republic Services, Recology, local chapters of the Solid Waste Association of North America, National Stewardship Action Council, Californians Against Waste, Resource

Recovery Coalition of California and a coalition of brands and environmental groups.

The bill was first introduced during the 2023 legislative session and passed the Senate. However, it was converted into a two-year bill to update language and accommodate more stakeholder input, including from retailers and the apparel industry that had originally opposed elements of the bill.

The American Apparel and Footwear Association recently said in a statement the version passed last week “is more implementable and better supports industry efforts towards circularity than what was introduced almost two years ago.” The group said this was due in part to stakeholder engagement and amendments that take into account brands’ resale efforts and remove liability for counterfeit products.

SB 1143: Once a HHW bill, now a paint update

California could soon expand its paint EPR program to cover more types of paint products if Newsom signs SB 1143. Previously, PaintCare covered only architectural paint, but the new bill now includes furniture paint, paint for boats and other types.

Paint is a significant source of household hazardous waste in California, and the updated bill aims to make the program less confusing for residents, according to state Sen. Ben Allen, who supported the bill. The American Coatings Association also supported the bill, along with WM, Waste Connections and multiple other waste or recycling groups.

The bill underwent numerous revisions over the last few months. It originally aimed to establish an EPR program for a wide range of HHW. The National Stewardship Action Council, the bill’s

sponsor, said it plans to continue negotiations for addressing other kinds of HHW in the coming year.

“Passing EPR framework legislation is a multi-year process, and we made enormous progress this first year,” said Executive Director Heidi Sanborn in a statement. “What was best for California was to ensure the PaintCare expansion got done to keep costs down and the program working, and then tackle the rest of the HHW stream next year allowing more time for negotiation.”

SB 1383 updates

Legislators passed numerous changes to SB 1383 requirements this year. That law calls on local jurisdictions to implement organics collection and procure more organic materials, among other elements. Some of these bills were inspired by a 2023 report from the Little Hoover Commission, an independent state oversight agency. Many of the bills that passed had some mixture of local government support, via groups such as the League of California Cities, as well as from industry entities such as Republic Services.

Among the most notable is SB 2902, which would waive rural jurisdictions from complying with collection and procurement requirements until Jan. 1, 2037. The bill saw support from groups such as the California State Association of Counties.

SB 2346 would make multiple changes to CalRecycle’s organics procurement requirements, which are currently set to ramp up by January 2025. Highlights include allowing jurisdictions “to invest in specified activities related to organic materials recycling in lieu of procuring recovered organics,” while also expanding the list of eligible products.

SB 1046 would require CalRecycle to develop a program environmental impact report for small to medium composting facilities. The goal is to streamline the process of siting and opening new composting facilities, which has been a pain point for local jurisdictions and the organics recycling industry.

SB 972, which directs CalRecycle to provide more technical assistance to local jurisdictions, also passed. Assembly amendments removed a requirement for the agency to submit progress reports about its implementation of the law and technical assistance provided.

Other notable bills

- **AB 863:** The bill replaces the state’s current carpet stewardship program with a new model that requires carpet producers to form and join a single PRO. Recent amendments removed provisions that would have widened the program to include carpet padding and some types of “resilient flooring” such as vinyl, linoleum and rubber. NSAC sponsored the bill.
- **SB 1066:** The bill requires manufacturers to create a plan for the collection, transportation, and “safe and proper management” of marine flares and certain other “pyrotechnic devices” used in recreational activities. The bill was originally pitched as an EPR program, but is now considered a “manufacturer responsibility program for the safe and proper management of marine flares.”
- **SB 1280:** The bill will require CalRecycle to adopt regulations to prohibit the sale of propane cylinders that are not reusable or refillable on and after Jan. 1, 2028. The bill’s authors estimated that more than 4 million one-pound disposable propane cylinders are sold in the state per year. Supporters included Californians Against Waste, California Waste & Recycling

Association, Republic Services, WM, the Solid Waste Association of North America's local chapters and others.
